

# NO MORE OVER INJECTION!

Another Profitable Environmental Solution by:

## SIRIUS INSTRUMENTATION and CONTROLS

Unable to reach low chemical injection rates?

Tired of over-injection, but the budget is not available for upgrading your pump technology?

Sirius's ChemSaver might be the solution you are looking for!

### APPLICATIONS AND BENEFITS

- Enables mechanical pumps, which are unable to reliably inject low rates, to inject at ULTRA LOW FLOW rates.
- Allows precise volume control of chemical to the process. No more over injecting!
- Automate your beam, pneumatic or electric pumping systems. Interface to SCADA to control rates or shut down injection when necessary.
- Several power options are available including onsite 110–240VAC power, 12/24VDC or Solar!
- Simple, intuitive control system.
- Cold weather display to -40°C/F with large buttons.
- Direct control in Liters (Quarts) per day or percentage of total injection.
- Optional: Built in ambient temp sensor, permitting control based on temperature.

## HOW TO SAVE MONEY

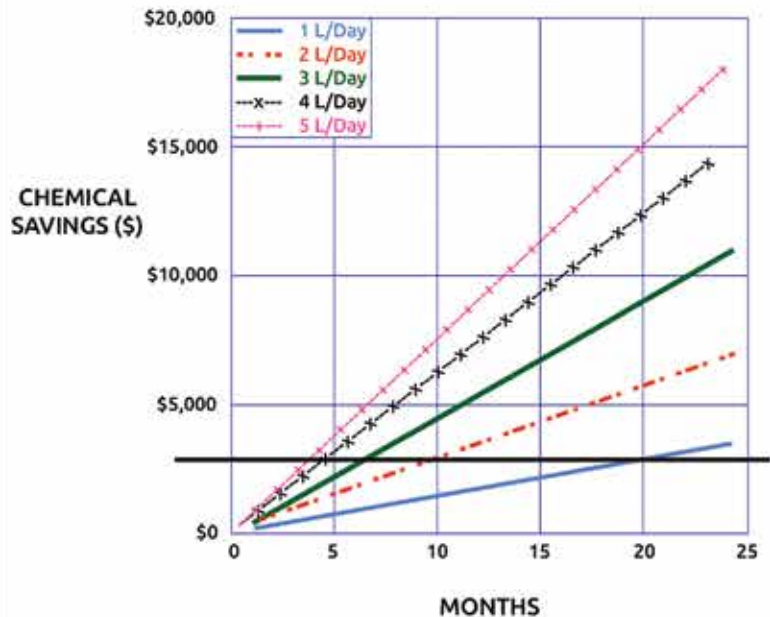

- Reduce Chemical Injected.
- Accurate to extremely low volumes < 1/4 L/Day (~1/4 Q/Day)
- Direct control in Liters (Quarts) per day or percentage of total injection.
- Built in ambient temp sensor allows rates to automatically scale with temperature changes.
- No more guessing at flow rates.
- No more costly over injection.

Set your ChemSaver to the rate you want... Done! No manual adjustments and wasted manpower.

Low rates and accuracy means no more over injecting expensive chemicals.

**CHEMICAL SAVINGS AND PAYOUT OF CHEM-SAVER  
BASED ON \$5/L CHEMICAL**
