Sirius Controls:

The story begins in October of 2018, when the Sirius Pump and associated parts was presented at the Permian Basin Oil Show. After an hour of looking at various pumps that were on display, just slid on by the Sirius presentation as by that time, a pump was a pump. December 2018 came around, and Brady Smith made the trip out to the [REDACTED], where drilling, fracking, completions, and production was on fire. The foreman of the [REDACTED] directed Brady out to the field Tech Management office, where he made his cold-call, and presented the Sirius pump. After his presentation, talked with [REDACTED], and initially purchased two electric pumps and one solar pump, to pilot and check out efficiency and reliability.

The pilot lasted 5 months without using any multi-points or Magic site glasses, and with a total of 16 new wells that were to come online, [REDACTED] approved purchase of solar pumps, with multi-points and Magic site glasses. Brady Smith and Anthony Yorkman both helped us, [REDACTED], in the installation and calibration of the Sirius equipment that was installed on the newly completed 16 wells. Immediately following, 7 more wells were completed with [REDACTED] and those wells also received Sirius pump controls.

Sirius pump controls have also been installed at the new compressor sites to pump methanol, and with the additional filtering ordered and installed have had no issues

The [REDACTED] team has been impressed with the constant great service that the Midland Sirius Team has provided. Any and all small issues have been resolved quickly, and with the equipment working as demonstrated, looking forward to the next 17 wells where they will be utilized.

The pump and the team behind them, along with the efficient displacement of chemical in the amount prescribed is a testament to the Sirius product.

Thank you kindly,
