To whom it may concern:

I'm a freelance production operations advisor working with various operators in the Permian. In this role, there are frequent opportunities to optimize the effectiveness of a chemical program and in turn maximize production and minimize problems and failures.

I was introduced to Sirius Controls in 2023 while researching a more reliable injection system with tight rate control and remote visibility into the health and performance of the pump and tank setup. The client I was working with at the time chose to trial a Sirius system on a critical application with an extremely high scaling tendency. A dual pump system was put in place with rate monitoring and remote visibility via the Sirius dashboard. That system has performed very well over the last 1.5 years and has been followed up with 6 more systems in similar critical service applications. Performance has exceeded expectations with reliability and injection rate accuracy.

Quality equipment and capable service.

Highly recommend Sirius Controls if you're interested in maximizing return on your chemical spend.

Happy to take calls to discuss my experience.
