To Whom It May Concern,

As the Marcellus & Utica shale plays mature, the need for innovative chemical injection solutions continued to grow. Historically, regional applications were limited to three primary needs: hydrate inhibition/freeze mitigation (methanol), paraffin inhibition, and occasionally, artificial lift (surfactant). However, over the past 3-4 years, we've observed a rapid expansion in customer's chemical injection needs.

Our partnership with Sirius Controls has enabled [REDACTED] to support these evolving needs. From increased accuracy and remote visibility of cap-string surfactants, to flow assurance in critical water treatment applications, Sirius's robust and reliable chemical injection solutions have repeatedly help [REDACTED] solve our customer's problems. Beyond their products, Sirius's level of customer support and technical knowledge is unmatched by any chemical pump manufacturer we've worked with in the past- no one comes remotely close. [REDACTED] strives to provide our customers with THE BEST products and services; Sirius has been a stellar addition to our line card and will continue to play a leading role in the growth of our company.

Sincerely,

[REDACTED]
Division Manager
