

Greetings,

I'm writing to provide a referral for the services provided by Sirius Controls for Hess in North Dakota.

We've deployed many Sirius skids on sites throughout our asset for various chemical injection needs and they've consistently delivered reliable equipment and responsive service. We have applications for treating gas streams for H₂S, ESP and gal lift wells, surface scale, emulsion, flare pilots, and methanol injections.

The skids perform reliably even in harsh conditions. The controls are very intuitive. Remote monitoring and control functions provide a considerable advantage over other pump systems. This has helped us maintain reliable chemical treatments in critical points across our operations, assists with projections, trending, and budgeting, and cuts required man hours substantially.

In addition, I'd like to acknowledge Account Manager  and his field service technicians  for their support.  is always very responsive, easy to work with, proactive about addressing our demands / requirements, and maintains a high level of urgency when we're working through the various challenges we're faced with on a regular basis.  are likewise responsive, dependable, and are great at addressing our needs even if it means going above and beyond to ensure our skids are reliably injecting.

Based on our experience to date, I would recommend Sirius to other operators looking for reliable, well-supported chemical injection solutions.

Feel free to reach out if there are any questions about our experience.

Sincerely,

Chemical Engineering Technician
